

Programming Basics — Questions & Answers

1. What is a program?

Question: Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).

Answer: A program is a set of instructions written in a programming language that tells a computer or mobile device how to perform a particular task. For example, in Zomato, a program helps users search for restaurants, select food items, place an order, and make a payment.

2. Popular programming languages

Question: List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.

Programming Language	Usually
Java	Compiled
Python	Interpreted
JavaScript	Interpreted / JIT-compiled

Note: The exact way a language runs can depend on its implementation, so these are the usual classifications.

3. Flowchart — Booking a Movie Ticket

Question: Draw a flowchart for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

4. Algorithm — Ordering Food on Swiggy

Question: Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

1. Start the Swiggy app.
2. Enter or select your delivery location.
3. Search for a restaurant or type of food.
4. Select a restaurant from the list.
5. Choose the food items you want to order.
6. Add the selected items to the cart.
7. Open the cart and check the order details.
8. Select or enter the delivery address.
9. Apply a coupon or offer, if available.
10. Select a payment method.
11. Check the total amount and tap Pay/Place Order.
12. Complete the payment.
13. Receive the order confirmation.
14. End.
