

Session3_4

Question: Identify and correct the invalid variable names from this list: 1stPlayer, player_age, \$score, total-marks, userName.

Hint: Apply standard variable naming rules for your programming language.

Answer: Standard C variable names should not start with a digit or contain special characters such as \$ or -. Letters, digits, and underscores can be used.

Given Variable	Valid / Invalid	Correct Variable Name	Reason
1stPlayer	Invalid	firstPlayer	Cannot start with a digit.
player_age	Valid	player_age	Uses valid letters and underscore.
\$score	Invalid	score	The \$ symbol is not allowed in standard C variable names.
total-marks	Invalid	total_marks	The hyphen (-) is not allowed in a variable name.
userName	Valid	userName	Uses valid letters and follows camelCase.

Final Answer: Invalid names: **1stPlayer**, **\$score**, and **total-marks**.
